

Global Profiles for Internal Displacements (GPID)

Harmonised demographic, socio-economic, and land use contexts
for 349 million internal displacements worldwide

Methodology, analysis, and visualisation: <https://dtm.iom.int/global-profiles-for-internal-displacement/gpid/index.html>

Data download: <https://data.humdata.org/dataset/iom-global-profiles-for-internal-displacement-gpid>

Internal displacements worldwide (2018–2024)

Internal displacements occur in all parts of the world, though, some are more affected than others.

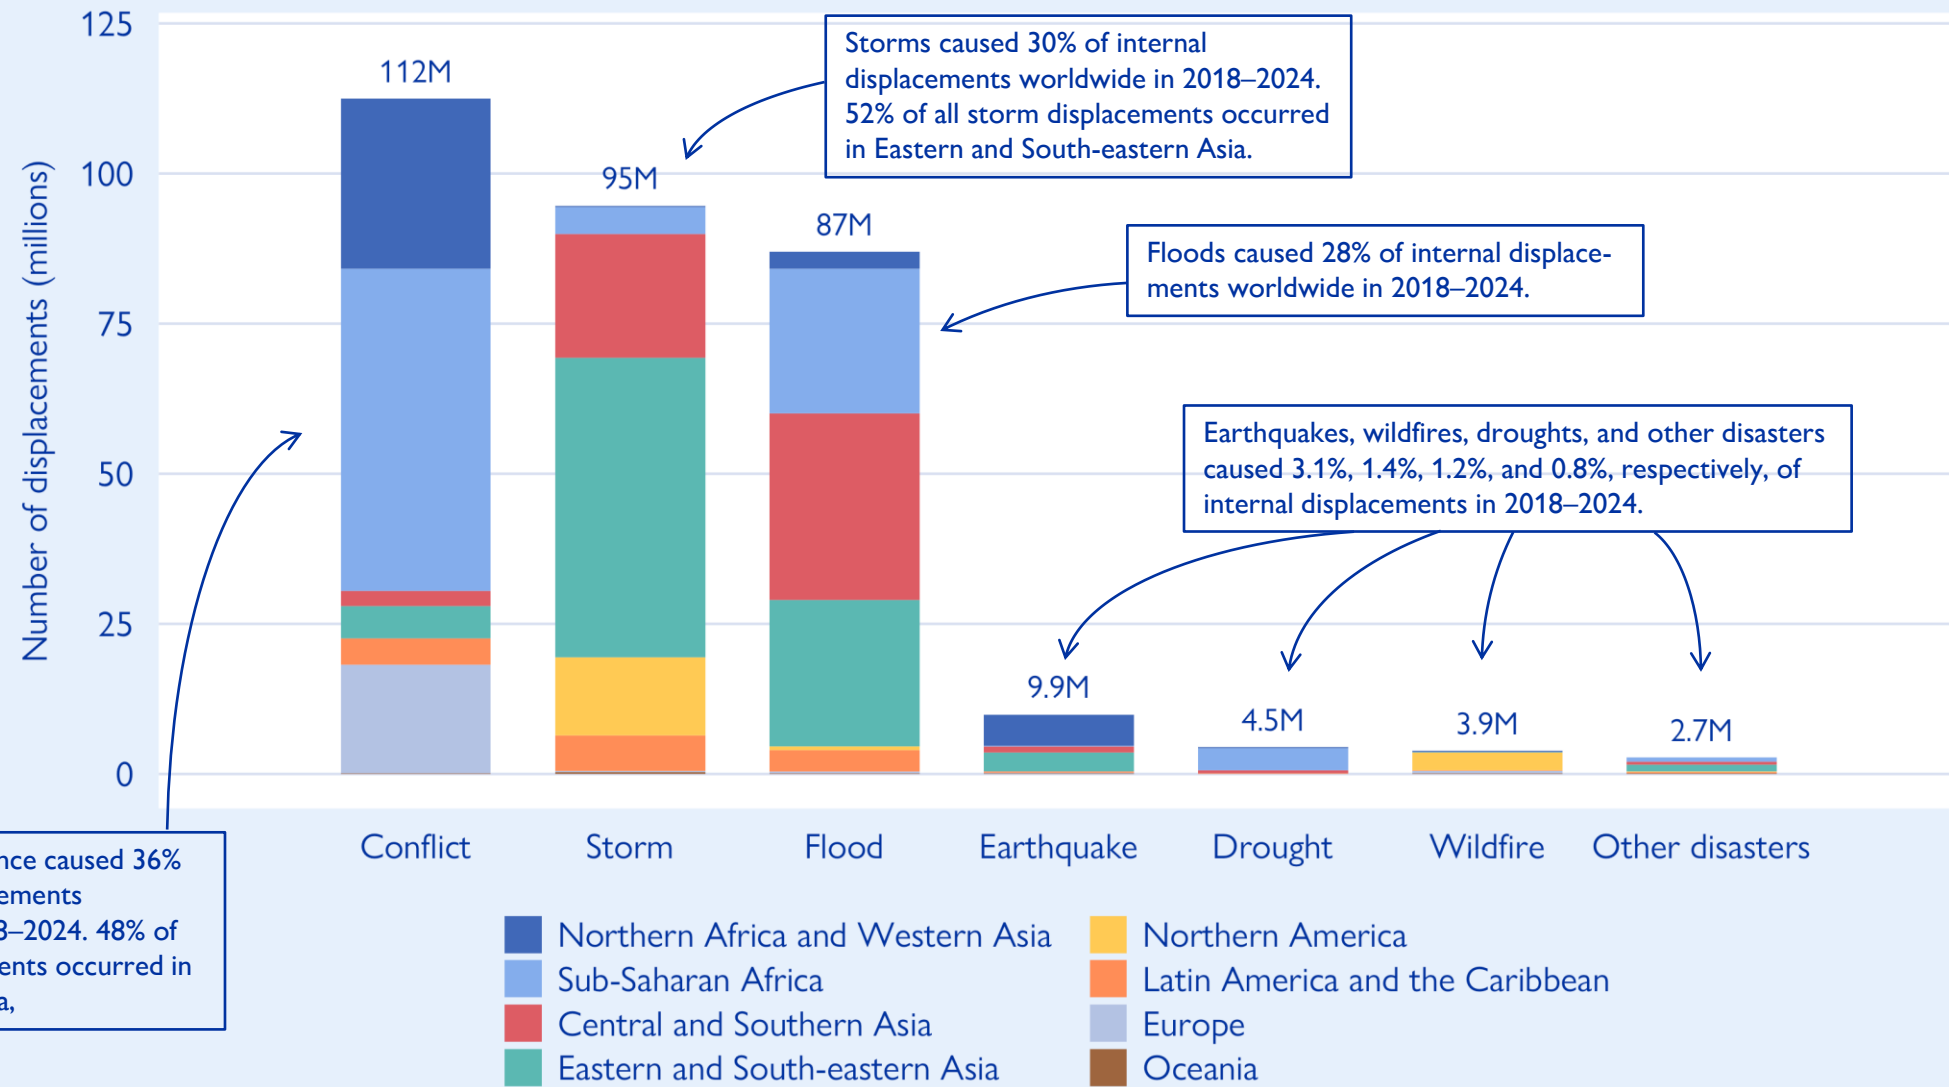

Number of displacements

○ 5,000 ○ 1,000,000 ○ 50,000,000

Cause of displacement

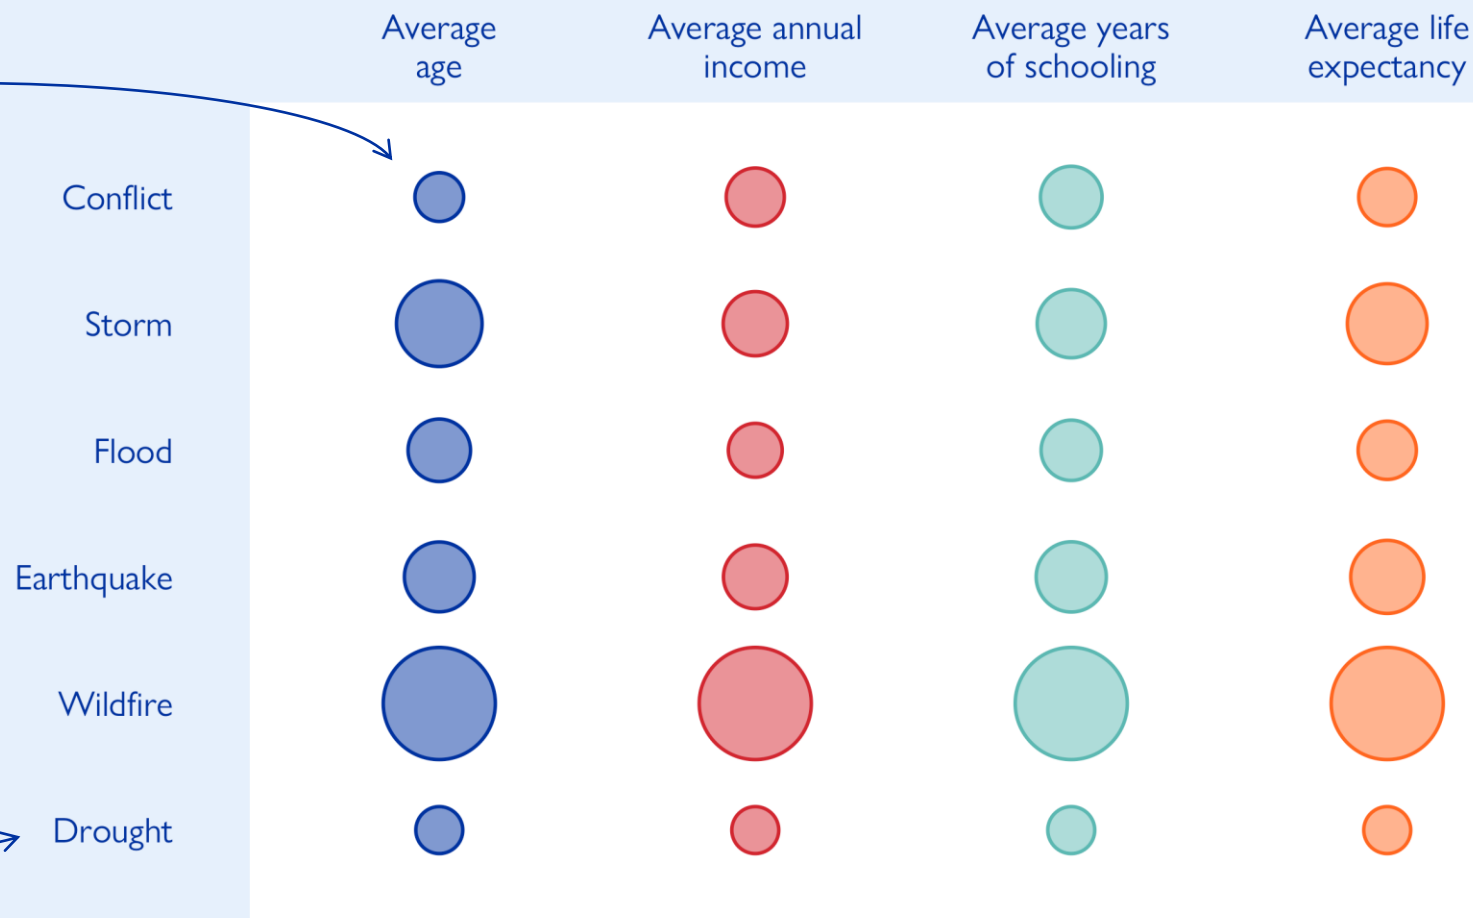

● Conflict ● Wildfire
● Storm ● Drought
● Flood ● Other disasters
● Earthquake

Displacements by cause and geographic region (2018–2024)

Demographic and socio-economic profiles of populations in areas of displacement by cause

Along with drought, populations in areas of **conflict displacement** are disproportionately young, with an average age of only 19.6 years.

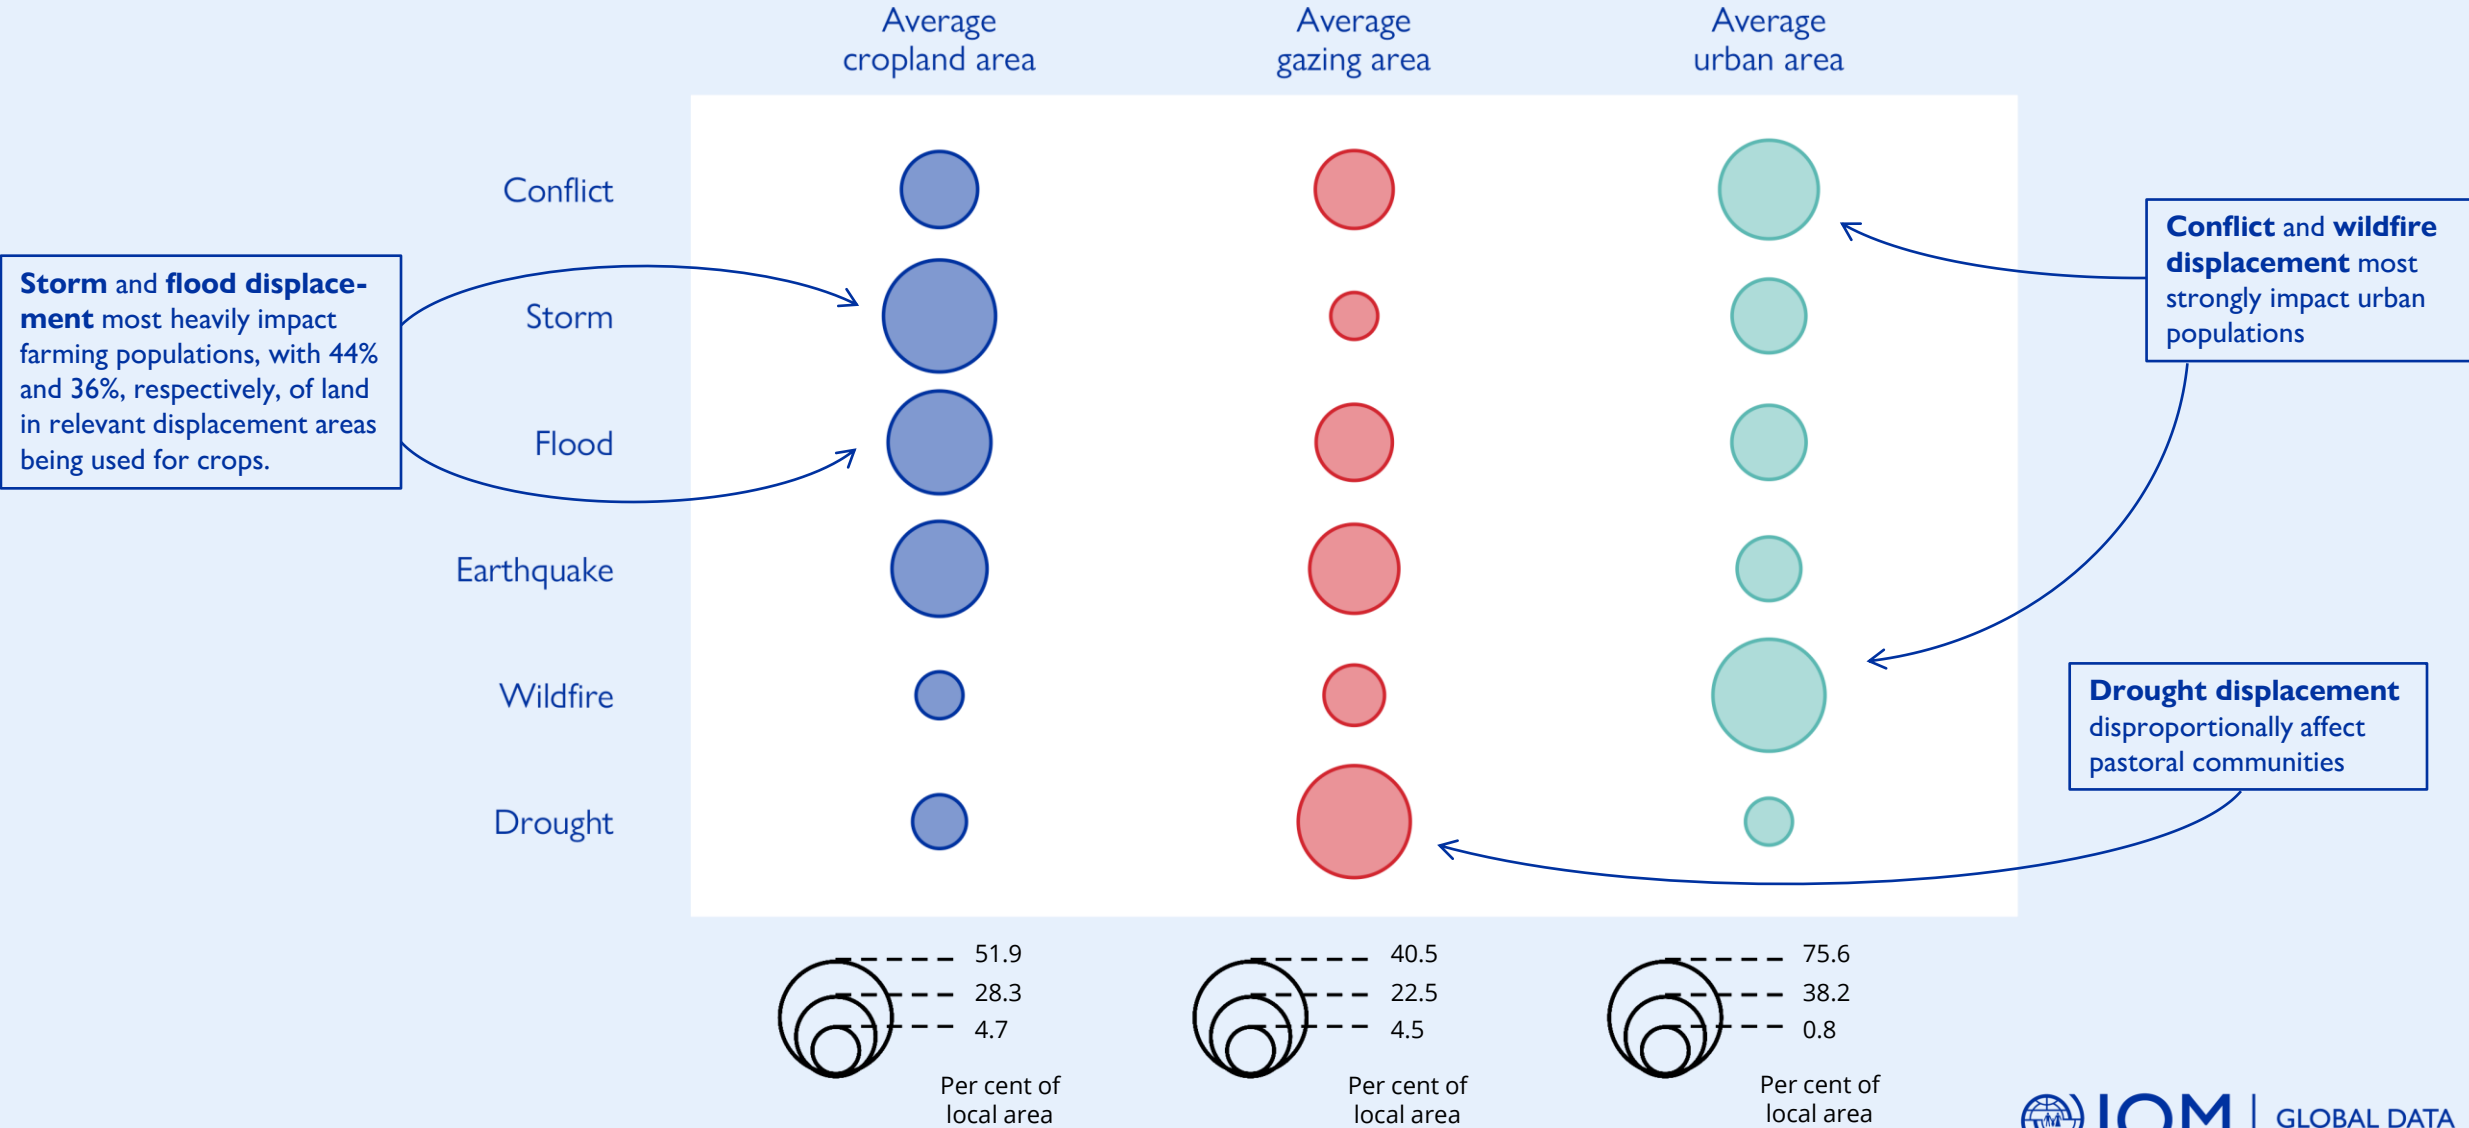

Populations in areas of **wildfire displacement** are overall the least vulnerable, with an average 35.7 years age, \$79,000 annual income, 12.6 schooling years, and 79.8 years life expectancy.

Populations in areas of **drought displacement** are overall the most vulnerable, with an average 18.0 years age, \$2,400 annual income, 3.0 schooling years, and 61.0 years life expectancy.

Land use profiles of populations in areas of displacement by cause

Demographic and socio-economic trends

Internal displacement occurs in overall more vulnerable areas today than it did in the past. Average **age** (28.3 years \searrow 19.7 years), **income** (\$11,000 \searrow \$1,600), years of **schooling** (7.4 years \searrow 6.3 years), and **life expectancy** (73 years \searrow 66 years) across displacement areas were all lower in 2024 than in 2018. These downward trends are statistically significant.

Land use trends

Compared to demographic and socio-economic indicators (see previous slide), **land use** characteristics of areas impacted by internal displacement overall do not display as clear a directional trend over time.
